

House in Trentino

Aluminium-PVC glass extension in a multi-family housey.

The flexible Classic conservatory system permitted the smooth realisation of a polygonal glass extension to this multi-family house in Trentino. The new glass structure serves as a staircase for the building, connecting two residential units. The classical appearance of the frame profiles means the extension perfectly matches the traditional design of the house. The materials selected were dark aluminium for the exterior and light PVC for the interior: both surfaces are very durable and easy to care for. The centre sealing and PVC core ensure excellent heat insulation values.

Type of building	Multiple-family dwelling
Project	New build/conversion
Country	Italy
Region	Trentino
